

Ashcroft® Low Differential Pressure Gauge is a Better Alternative

The newly-released Ashcroft® Type 1134 pressure gauge is a great value for customers looking for a rugged, yet cost-effective solution to measure low differential pressure. In addition to the exclusive field-adjustable low-cost switch option, this new product brings standard features to the differential pressure gauge market that, until now, were either not offered or were provided only as options on competitor's products.

Dual side or back connections; panel mounting hardware; higher static pressure than comparable gauges; stainless steel case; and four wrench flats are all part of the standard Ashcroft® Type 1134 gauge package. And although this product delivers more features, it is competitively priced. The unit was designed to fit a 4-9/16 panel cutout or to be pipe or surface mounted.

The low-cost switch option can have up to two set points, is field adjustable and is enclosed in an IP65 watertight housing.

This new Ashcroft® Type 1134 differential pressure gauge is well-suited for fume hoods, filter monitoring and bio-pharm applications and for flow processes.

WWW.PROQUIP.NET

Proquip, Inc. has a fully licensed Ashcroft assembly and repair shop in house!

Call Us today for:

- Diaphragm seal assembly.
- Instrument liquid fills
- Instrument calibration traceable to N.I.S.T.
- Custom capillary assemblies/filling
- Gauge accuracy matching.
- Repair/Calibration Contracts (Annual or Periodic)
- Mercury Manometer Vacuum Gauge Testing.
- Hydraulic Burst Testing up to 40,000 PSI.
- Panel Manufacturing
- Set Point Adjusting & Testing of pressure switches, Pressure Reducing Regulators, and Back Pressure Regulators
